

Water Management Policy – Statement

For Eurobank, environmental responsibility is an essential part of sustainable business development. As a financial group, we are committed to the responsible management of water use by seeking the optimal use of natural resources as part of the overall Environmental culture, in all of its facilities, including both branches and Administration buildings.

Specifically, we are committed to the following:

- Monitoring, measuring consumption and identifying significant and abnormal water use, including leaks
- The comparison of consumption with reference indicators of water use
- Ensuring that its activities meet legal requirements regarding water conservation and management
- Improving the water use efficiency in existing buildings and facilities with targeted upgrading programs
- Investigating the possibility of collecting and using rainwater
- Minimizing water use through best daily maintenance and cleaning practices
- The use of specifications for low water consumption equipment
- Communicating with staff to encourage water saving culture

Top Management provides all the necessary resources to fulfill all the above, and implements the Environmental Management System, certified according to the international standard ISO 14001, in order to ensure the correct implementation of this statement and the continuous improvement of relevant environmental performance.
